Data Points Measured

Unekor Eye X0 features two high speed cameras, allowing extremely precise measurements.

- Ball Speed
- Back Spin
- Side Spin
- Side Angle & Total
- Launch Angle
- Land Angle
- Angle of Descent
- Flight Time
- Distance to Apex
- Carry
- Run
- Total Distance

Unekor Technology

Uses ultra-high-speed cameras to capture and analyze your shot data. Capable of capturing over 3000 frames per second, these devices provide superb accuracy and instant shot display. The differentiator with Unekor lies in their Ball, Club, and Swing OPTIX technology.

Accuracy of Uneekor

Without a doubt, the accuracy of the Uneekor EYE X0 series are top-notch. From driver to wedge, the EYE X0 is right up there with TrackMan and FlightScope X3 in regards to accuracy.

And not just with distance numbers. The Uneekor is accurate across the board - from spin, launch angles, swing speed, and more. Unlike TrackMan these launch monitors don't miss many shots. From duck hooks, to shanks, to 300+ yard drives, these devices are able to pick up a variety of abnormal shots. Which is something that many launch monitors tend to misread.

CLUB OPTIX

Hide Delete

Uneekor Instant Data Feedback

The speed at which these launch monitors pick up the shot is also a huge plus. In just about as much time as it takes for you to lift your head up towards the target after impact, these devices will have your data and your shot tracer displayed.

This really adds to the realism of your experience. Even though you're hitting balls indoors into a screen, it really feels like you're hitting out onto a driving range. The timing of when you hit the ball to the speed at which the shot tracer is displayed feels very real.

Putting Capabilities

With the Uneekor EYE XO, you get a full golf simulator that has superb putting functionality and is just as good for honing your iron game, woods and driver. It is considered better than the SkyTrak and on par with many professional systems.

In the E6 software you will see the best line that your ball should take to the cup and the EYE XO will accurately represent the path that your ball would actually take using its ability to precisely measure the ball dynamics when your club strikes the ball.

Even better, the EYE XO uses unmarked ball technology so you can use any ball you want and offers powerful features and additional data parameters.
